MEMORANDUM FOR THE RECORD

SUBJECT: Signal Processing/Analysis

1. At the conclusion of my briefing the DD/S, ADD/S, D/L, DD/L, and C/LSD, Mr. Bannerman, DD/S, stated that he would like to take up a new subject; namely, his desire to have an analysis made of signal processing in the Agency.

2. Mr. Bannerman pointed out that by and large the BPS Building Planning Program was concerned with administrative elements of the Agency. He wondered what the effect on Building Planning would be if we approached long-term projections on a functional cross section basis.

3. During the last few days, Mr. Bannerman had discussed with Donald Steineger, ADD/S&T, and [REDACTED], AD/OCS/DDS&T, the advisability of considering the effect of consolidating signal processing research type activities of the Agency. Mr. Bannerman noted that he was not certain of the practicality of attaining such a consolidation and asked that I undertake with the BPS staff an examination of how such a consolidation might be carried out and whether any savings in money, man power, or space could be derived from such an effort.

4. No deadline was set, but it was requested that I contact the various offices of the Agency involved in this work in order to draw some conclusions as to the effect of this type of move. I mentioned that I was unaware of all of the Agency components involved in this type of work whereupon Mr. Coffey, ADD/S, stated he would obtain a list from the Office of Communications and forward it to me. Mr. Coffey obtained such a list and transmitted it over the green phone to [REDACTED] (see list attached).
